G1030-A

Portable soybean analyzer

The portable soybean analyzer can be used for rapid, nondestructive and multi-index quantitative detection and analysis of soybean in collection, storage and processing. To providing a rapid detection method for grain quality identification. The equipment can be used in laboratory, workshop field and other different places.

Main technical indexes of the instrument

Application field: soybean industry

Detection index: protein, moisture, fat

Application scenarios: Acquisition, warehousing and processing

Scenarios: indoor and on-board detection

technical parameter

Test samples: soybean

Detection time: < 3 min

Detection method: grating transmission

Weight: < 8kg

Working temperature: - 10 °C ~ 45 °C

Display screen: touch screen

Product size: 210mmX293mmX228mm

Battery: Detachable lithium battery
