P1010

Portable Rapeseed Analyzer

The instrument is applicable for multiple links like the acquisition, storage, and processing of rapeseed, realizing rapid, non-destructive, multi-index quantitative detection and analysis. This serves as a rapid detection method for rapeseed quality identification. The instrument can be used in places like laboratories and workshops.

Main technical indicators

Test sample: rapeseed

Test indicators: protein, oil, erucic acid

Application areas: acquisition, warehousing, processing

Technical parameters

Detection time: < 1 minute

Display screen: Capacitive touch screen

Working temperature: -10°C ~ 40°C

Instrument size: 390*260*350mm

Battery: Detachable lithium batt

Weight: < 12kg

Function: There is an online instrument diagnosis function; it can realize the docking of agricultural product traceability management platforms at all levels and enterprise data management systems; it can upgrade networked remote services.
